

OPEN TOP BAG FILLING SBF Series

Standard “plug & play” mobile unit
for 5kg to 25kg sugar open top bags

Based on 55 years’ experience and knowledge in **Mechanical Flexible Conveying technology** for all powders, SUGAR INPROCESS has developed a special **easy to start standard equipment** for the semi-automatic packing of sugar open top bags from 5 to 25 kilograms. This plug and play equipment is available for icing sugars as for crystal sugars.

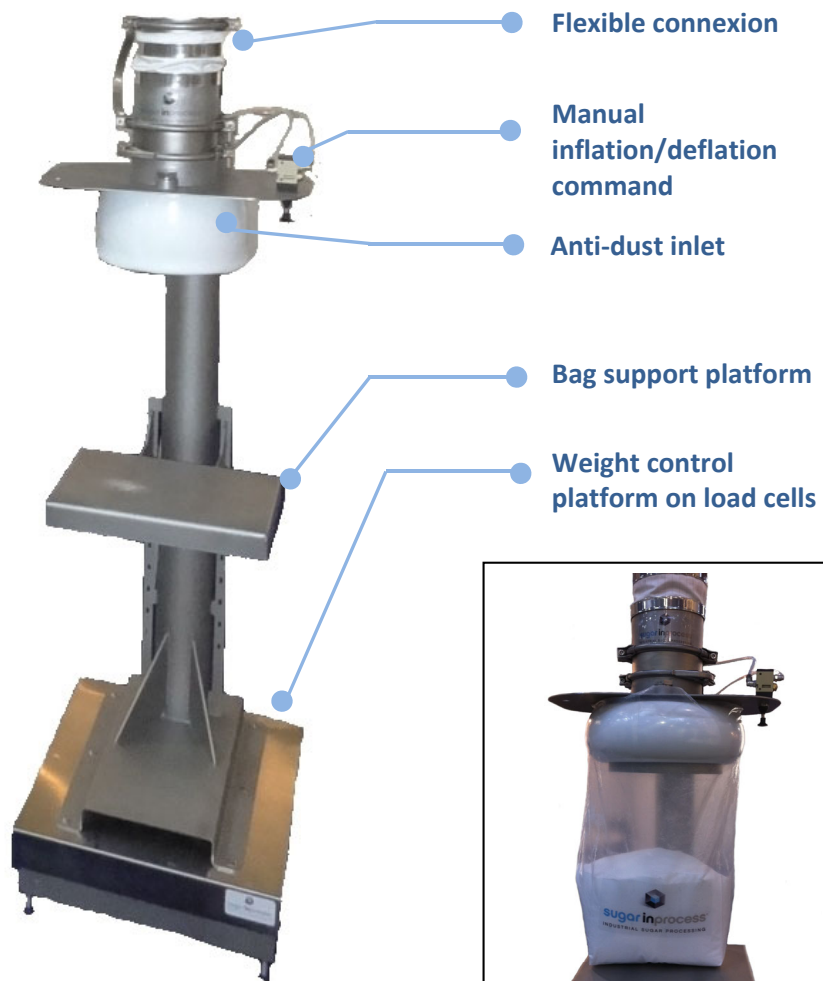

The SBF series are specially designed with standard support and flexible interface to connect a Sugar Inprocess® dosing line or your existing one, and a special anti-dust inlet mouth to fix the bag and fill it hermetically.

A platform on load cells assures the exact required weight and a control panel completes the unit.

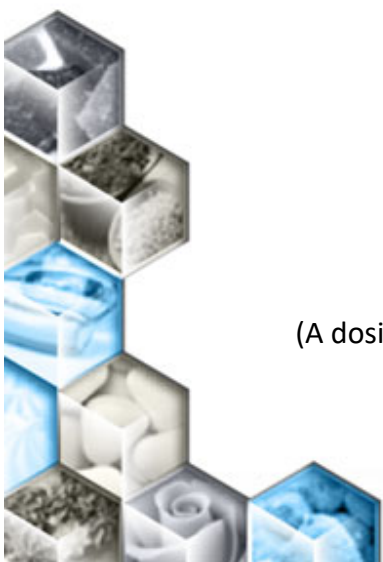

Control terminal

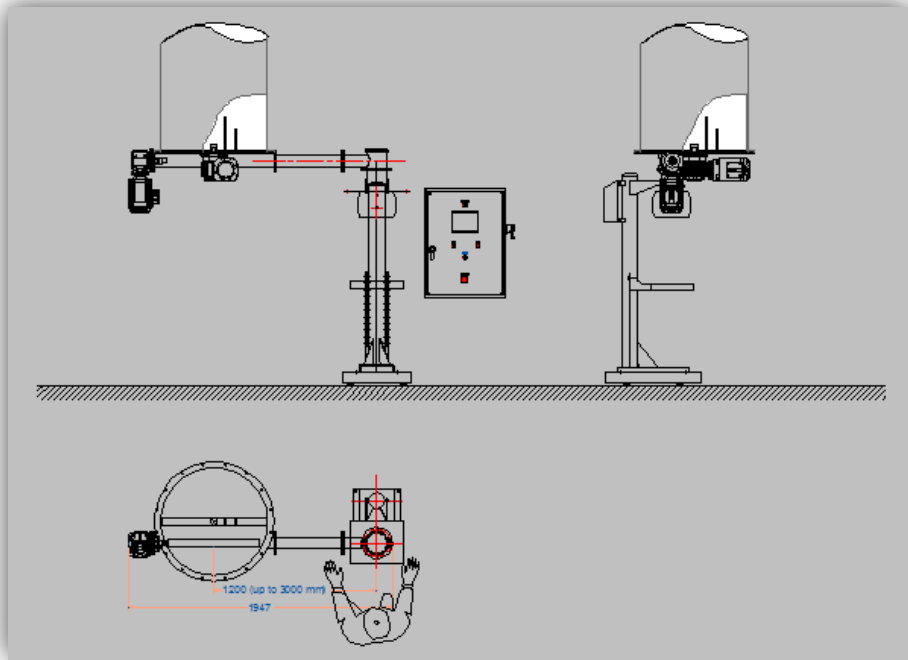

Air pressure limiter

(A dosing line can be quoted in option if required)
